Step-by-Step Process of the McCabe-Thiele Method

- Plot the equilibrium curve: Obtain data for vapor-liquid equilibrium (VLE) and plot the equilibrium curve on a temperature vs. composition diagram.
- Determine feed and product compositions: Establish the mole fractions of the feed, distillate, and bottom products.
- Draw the operating lines:
 - Rectifying operating line (above the feed point) based on reflux ratio and distillate composition.
 - Stripping operating line (below the feed point) based on bottom composition and flow rates.
- Construct the staircase diagram:
 - Starting from the distillate composition, draw horizontal lines to the equilibrium curve.
 - Connect these points with vertical lines along the operating lines.
 - Repeat until reaching the bottom composition.
- Count the number of stages:
 - Each step in the staircase represents a theoretical stage.
