SMACNA provides tables and formulas to determine maximum support spacing, which typically ranges from 4 to 10 feet depending on duct size and support type.

Types of Supports

SMACNA outlines specific types of supports suitable for various conditions:

- Hangers: Devices that suspend ductwork from structural elements like beams or ceilings.
- Straps and Bands: Used for smaller ducts or as secondary supports.
- Bridging and Cross Bracing: To prevent lateral movement and maintain alignment.
- Sleeves and Anchors: For securing supports to structural components.

Support Materials and Hardware

Supports must be constructed from durable, non-corrosive materials compatible with duct materials and environmental conditions. Common hardware includes:

- Steel or stainless-steel rods and hangers

- Spring hangers for vibration isolation
- Insulated supports for thermal or acoustic purposes
- Bolts, nuts, and washers that meet industry standards

SMACNA Duct Support Details: Step-by-Step Implementation

- Structural Assessment and Planning

Before installation, conduct a thorough assessment of the building's structural framework to identify suitable attachment points. Review architectural and structural drawings to determine:

- Location of beams, joists, or walls
- Available space for supports
- Load-bearing capacity of structural elements

- Selecting the Appropriate Support System

Choose the support type based on:

- Duct size and weight
- Environmental conditions
- Vibration and noise considerations
