Sample "Float My Boat" Math Problems and Solutions

Problem 1: Will the Boat Float?

Question: A boat weighs 200 kg and is made of wood with a density of 0.6 g/cm³. The boat's volume is 500,000 cm³. Will the boat float in water?

Solution:

- First, find the weight of water displaced by the boat when floating.
- The density of water = 1 g/cm³.
- The weight of the boat in grams:

$$200 \text{ kg} = 200,000 \text{ g.}$$

- The weight of water displaced (buoyant force) when floating must be equal to the weight of the boat.
- Volume of water displaced = volume of the boat = 500,000 cm³.
- Weight of displaced water = 500,000 cm³ × 1 g/cm³ = 500,000 g = 500 kg.
- Since the boat weighs only 200 kg, and it displaces water weighing 500 kg, it will float.

Answer: Yes, the boat will float because its weight is less than the weight of water it displaces.

Problem 2: Calculating the Volume of an Irregular Object

Question: A metal object weighs 3 kg and sinks when placed in water. Its density is 7.8 g/cm³. What is the volume of the object?

Solution:

- Convert the weight to grams: 3 kg = 3000 g.
- Use the formula:

$$\text{Volume} = \text{mass} / \text{density}$$

- Volume = 3000 g / 7.8 g/cm³ = 384.62 cm³

Answer: The volume of the object is approximately 385 cm³.

Problem 3: Determining the Total Weight of a Boat and Cargo

Question: A boat with a volume of 1,200,000 cm³ is made of wood with a density of 0.6 g/cm³. The boat is carrying cargo weighing 500 kg. Will it float?

Solution:

- Find the weight of the boat:
- Volume of boat = 1,200,000 cm³
- Density of wood = 0.6 g/cm³
- Mass of the boat = $1,200,000 \times 0.6 \text{ g} = 720,000 \text{ g} = 720 \text{ kg}$
- Total weight (boat + cargo) = $720 \text{ kg} + 500 \text{ kg} = 1,220 \text{ kg}$
- Displaced water weight when floating:
- Volume of displaced water = volume of the boat = 1,200,000 cm³
- Weight of displaced water = 1,200,000 g = 1,200 kg
- Since total weight (1,220 kg) exceeds the displaced water weight (1,200 kg), the boat will sink.

Answer: No, the boat will sink because the total weight exceeds the buoyant capacity.

Deep Dive into Sample "Float My Boat" Problems and Solutions

Sample Problem 1: Calculating Displacement and Buoyancy

Scenario: A boat with a volume of $10,000 \text{ cm}^3$ is made of a material with a density of 2.5 g/cm^3 . Will the boat float in water? Assume the boat is fully submerged.

Solution Approach:

- Calculate the mass of the boat:

$$\text{Mass} = \text{Volume} \times \text{Density} = 10,000 \text{ cm}^3 \times 2.5 \text{ g/cm}^3 = 25,000 \text{ g.}$$

- Determine the weight of the displaced water:

Since the boat is fully submerged, it displaces $10,000 \text{ cm}^3$ of water.

- Density of water = 1 g/cm^3 .
- Displaced water weight = $10,000 \text{ g}$.
- Compare boat mass and displaced water weight:
- Boat weight = $25,000 \text{ g}$.
- Displaced water weight = $10,000 \text{ g}$.

Conclusion: The boat's weight exceeds the buoyant force (displaced water weight), so it would sink.

Answer Validation: The provided answer in the worksheet's answer key should confirm that the boat

sinks under these conditions.

Sample Problem 2: Designing a Floatable Boat

Scenario: You are to design a boat that can carry a load of 5000 g. The boat's hull has a volume of 8,000 cm³, and it is made of a material with a density of 1.8 g/cm³. Can the boat carry the load without sinking?

Solution Approach:

- Calculate the weight of the boat:
- Boat material mass = $8,000 \text{ cm}^3 \times 1.8 \text{ g/cm}^3 = 14,400 \text{ g}$.
- Determine additional volume needed to support the load:
- Total weight to support = boat + load = $14,400 \text{ g} + 5,000 \text{ g} = 19,400 \text{ g}$.
- Calculate the total displaced water volume:
- Since water density is 1 g/cm³, the total displaced volume required = total weight in grams = 19,400 cm³.
- Assess if the boat can support this:
- Current hull volume = 8,000 cm³.
- Additional volume needed = $19,400 \text{ cm}^3 - 8,000 \text{ cm}^3 = 11,400 \text{ cm}^3$.

Conclusion: The boat must have a total volume of at least 19,400 cm³ to carry the load safely; otherwise, it will sink.

Answer Validation: The answer key should specify whether the existing hull volume suffices or if modifications are necessary.

Answer: 60°

Problem 2: Calculate the Length of a Segment Using Secants

Question: Two secants intersect outside a circle. One secant has a segment outside the circle measuring 3 units, and the entire secant (outside plus inside the circle) measures 8 units. The other secant outside measures 5 units, with the entire secant length being 12 units. Find the length of the segments inside the circle for both secants.

Solution:

- Use the secant segment product property: Outside segment $\times$ entire secant length = product for the other secant.
- For the first secant:
 - Outside segment = 3 units
 - Entire secant = 8 units
 - Inside segment = $8 - 3 = 5$ units
- For the second secant:
 - Outside segment = 5 units
 - Entire secant = 12 units
 - Inside segment = $12 - 5 = 7$ units

Answer: Inside segments measure 5 units and 7 units, respectively.

- The tangent segment from a point outside a circle has equal lengths if drawn to two points of tangency.
- The tangent-secant theorem states: If a tangent and secant are drawn from an external point, then the square of the tangent segment equals the product of the entire secant segment and its external part.

Sample Problem:

Given a circle with a tangent from point P, and a secant passing through the circle, find the length of the tangent segment.

Answer Key Explanation:

- Identify the external point and the segments involved.
- Apply the tangent-secant theorem: $PT^2 = (PA)(PB)$
- Substitute known lengths and solve for the unknown.

Common Pitfalls:

- Confusing the external and internal segments.
- Forgetting to square the tangent length.

2. Inscribed and Central Angles

Core Concepts:

- An inscribed angle intercepts an arc; its measure is half the measure of the intercepted arc.
- A central angle's measure equals the measure of its intercepted arc.
- The sum of inscribed angles intercepting the same arc is 180° .

Sample Problem:

Find the measure of an inscribed angle if it intercepts an arc measuring 100° .

Answer Key Explanation:

- Use the inscribed angle theorem: $\text{angle} = \frac{1}{2} \times \text{arc measure}$
- Calculation: $\frac{1}{2} \times 100^\circ = 50^\circ$

Common Pitfalls:

- Mixing up inscribed and central angles.
- Misidentifying the intercepted arc.

3. Arc Length and Area Calculations

Core Concepts:

- Arc length formula: $\text{Arc Length} = r \times \theta$ (in radians)
- For degrees: $\text{Arc Length} = \frac{\theta}{360} \times 2\pi r$
- Sector area: $\text{Area} = \frac{\theta}{360} \times \pi r^2$

Sample Problem:

Calculate the length of an arc with a radius of 10 cm and a measure of 60° .

Answer Key Explanation:

- Convert the angle to radians or use the degree formula:

$$\text{Arc Length} = \frac{60}{360} \times 2\pi \times 10 = \frac{1}{6} \times 20\pi \approx 10.47 \text{ cm}$$

Common Pitfalls:

- Forgetting to convert degrees to radians when necessary.
- Misapplying formulas for arc length versus sector area.

4. Chord Properties and Intersecting Chords Theorem**Core Concepts:**

- Chords intersect inside a circle; the products of the segments are equal: $AE \times EB = CE \times ED$
- The measure of an angle formed by two chords intersecting inside a circle is half the sum of the measures of the intercepted arcs.

Sample Problem:

Find the measure of an angle formed by two chords intersecting inside a circle, given intercepted arcs.

Analyzing the Chapter 11 Review Gases Answer Key

An effective answer key isn't just about providing correct answers but also explaining the reasoning, steps, and underlying concepts. Here, we review common question types and their solutions.

Sample Question 1: Calculating Pressure Using Boyle's Law

Question:

A 2.00 L container holds 1.00 mol of gas at 25°C. What will be the pressure if the volume is decreased to 1.00 L at constant temperature?

Answer Key Breakdown:

- Given: $(V_1 = 2.00\text{ L})$, $(V_2 = 1.00\text{ L})$, $(n = 1.00\text{ mol})$, $(T = 25^\circ\text{C})$ (convert to Kelvin: 298 K).

- Use Boyle's Law: $(P_1 V_1 = P_2 V_2)$.

- Find (P_2) :

$\{$

$$P_2 = P_1 \times \frac{V_1}{V_2}$$

$\}$

Assuming initial pressure (P_1) is derived from ideal gas law:

$\{$

$$P_1 = \frac{nRT}{V_1} = \frac{(1.00\text{ mol})(0.0821\text{ L}\cdot\text{atm}\cdot\text{mol}^{-1}\cdot\text{K}^{-1})(298\text{ K})}{2.00\text{ L}} \approx 12.2\text{ atm}$$

$\}$

Therefore,

$\{$

$$P_2 = 12.2\text{ atm} \times \frac{2.00\text{ L}}{1.00\text{ L}} = 24.4\text{ atm}$$

$\}$

Key Takeaway:

The answer illustrates the direct proportionality of pressure and inverse volume at constant temperature and demonstrates the step-by-step calculation process.

Sample Question 2: Using the Ideal Gas Law to Find Moles

Question:

What volume will 3.00 mol of gas occupy at 0°C and 1 atm?

Answer Key Breakdown:

- Convert temperature: $(0^{\circ}\text{C} = 273\text{K})$.
- Use $(PV = nRT)$:

[

$$V = \frac{nRT}{P}$$

]

- Substitute values:

[

$$V = \frac{(3.00\text{mol})(0.0821\text{L}\cdot\text{atm}\cdot\text{mol}^{-1}\cdot\text{K}^{-1})(273\text{K})}{1\text{atm}} \approx 67.2\text{L}$$

]

Question What is the main focus of Chapter 11 in the gases review answer key? Chapter 11 primarily focuses on the properties of gases, gas laws, and how gases behave under different conditions such as pressure, temperature, and volume. How does Boyle's Law relate pressure and volume in gases? Boyle's Law states that at constant temperature, the pressure of a gas is inversely proportional to its volume, meaning if one increases, the other decreases. What is Charles's Law and how is it used? Charles's Law states that the volume of a gas is directly proportional to its temperature (in Kelvin) at constant pressure, which helps predict how gases expand when heated. Explain the concept of Gay-Lussac's Law. Gay-Lussac's Law states that the pressure of a gas is directly proportional to its temperature (in Kelvin) when volume is held constant. What is the ideal gas law and its formula? The ideal gas law combines Boyle's, Charles's, and Gay-Lussac's laws into the formula $PV = nRT$, where P is pressure, V is volume, n is moles of gas, R is the gas constant,

and T is temperature. How do real gases deviate from ideal behavior according to the review? Real gases deviate from ideal behavior at high pressures and low temperatures due to intermolecular forces and the volume occupied by gas particles. What is meant by molar volume of a gas? Molar volume is the volume occupied by one mole of a gas at a specific temperature and pressure, typically 22.4 liters at STP. How is Dalton's Law of Partial Pressures used in gas mixtures? Dalton's Law states that the total pressure of a gas mixture is the sum of the partial pressures of each individual gas present. What are STP conditions and why are they important? Standard Temperature and Pressure (STP) are defined as 0°C (273.15 K) and 1 atm pressure, providing a common basis for comparing gas volumes and calculations. Why is the answer key for chapter 11 review gases useful for students? The answer key helps students verify their understanding, provides quick reference to key concepts and formulas, and aids in exam preparation related to gases.

- Inscribed Angles and Their Opposite Arcs

Sample Problem:

An inscribed angle in a circle measures 50° . What is the measure of its intercepted arc?

Answer Explanation:

The inscribed angle theorem states that an inscribed angle measures half of the intercepted arc. Therefore, the intercepted arc's measure is:

$$50^\circ \times 2 = 100^\circ$$

Implication:

- Inscribed angles always measure half the size of their intercepted arcs.
- Recognizing this relationship is key to solving many circle problems.

- Chord and Secant Properties

Sample Problem:

Two secants intersect outside a circle, forming two segments with lengths of 4 and 10 units, and 3 and 15 units, respectively. Find the measures of the angles formed.

Answer Explanation:

When two secants intersect outside a circle, the measure of the angle between them is half the difference of the measures of the intercepted arcs:

Angle measure = $\frac{1}{2}$ (Difference of intercepted arc measures)

First, find the intercepted arcs:

- Secant segments: 4 and 10 units, and 3 and 15 units.
- The corresponding intercepted arcs are proportional to the segments, but since the problem involves segments outside the circle, the key is to apply the secant angle theorem, which states:

The measure of an angle formed outside the circle is equal to half the difference of the measures of the intercepted arcs.

This problem emphasizes understanding the secant-tangent theorem and the importance of segment relationships.

Common Theorems and Principles in the Answer Key

The answer key highlights several fundamental theorems that serve as the backbone for solving circle-related problems:

- Inscribed Angle Theorem: An inscribed angle measures half of the intercepted arc.
- Central Angle Theorem: A central angle's measure equals the intercepted arc's measure.
- Chord-Chord Power Theorem: The product of the segments of one chord equals that of another intersecting chord inside the circle.
- Tangent-Secant Power Theorem: The square of the tangent segment equals the product of the secant segment and its external part.
- Angles Outside the Circle: The measure is half the difference of intercepted arcs.

By referencing these theorems, the answer key provides a structured approach to solving circle problems efficiently.

Strategies for Using the Answer Key Effectively

For students, the answer key isn't just a tool to check correctness but a learning resource. Here are strategies to maximize its benefits:

- Study the Step-by-Step Solutions: Review each problem carefully, paying attention to the reasoning process.
- Identify Patterns and Theorems Used: Recognize which theorems or properties are applied in each solution.
- Practice Similar Problems: Use the solutions as models to tackle similar questions independently.
- Clarify Mistakes: If a problem was answered incorrectly, analyze the solution to understand the mistake.

For teachers, the answer key serves as a benchmark for grading and as a resource for designing supplementary lessons focusing on common misconceptions.

Practice Problems Inspired by the Test and Answer Key

To reinforce understanding, here are some practice questions based on the themes covered in the answer key:

- In a circle, an inscribed angle measures 70° . What is the measure of its intercepted arc?
- Two chords intersect inside a circle, forming segments of lengths 6 and 8 on one chord, and 10 and 12 on the other. Find the products of the segments and explain the significance.
- A tangent and a secant intersect outside a circle, forming a 40° angle. The secant intersects the circle, creating an external segment of 5 units. Find the length of the secant segment inside the circle.
- If a central angle measures 120° , what are the measures of the major and minor arcs it intercepts?

Answers to these questions can be cross-referenced with the principles outlined in the answer key to reinforce learning.
