Understanding Pipeline Pigging: An Overview

What is Pipeline Pigging?

Pipeline pigging refers to the use of devices known as "pigs" to perform various maintenance operations inside pipelines without the need for full system shutdowns. These devices are inserted into the pipeline and propelled by the flow of the product itself—such as oil, gas, or water—through the pipeline. The primary functions of pigging include cleaning, inspection, separation, and product changeover.

Historical Development of Pipeline Pigging

The concept of pigging dates back to the early 19th century with the advent of early cleaning devices for water pipelines. Over the decades, technological innovations have transformed pigging from simple cleaning tools to sophisticated inspection and monitoring devices. The 3rd edition of the pipeline pigging handbook reflects these advancements, emphasizing modern techniques, materials, and data analysis methods.
