Designing Effective Discrete Structure Objective Questions

Creating high-quality objective questions requires careful planning to ensure they accurately assess understanding and are free from ambiguity. Expert question designers consider the following:

Clarity and Precision

- Use straightforward language.
- Avoid double negatives or complex sentence structures.

Focus on Key Concepts

- Center questions around fundamental topics such as set operations, logic, graph properties, etc.
- Avoid overly obscure or trivial questions.

Balance Difficulty Levels

- Mix easy, moderate, and challenging questions.
- Ensure a fair assessment of different skill levels.

Inclusion of Distractors

- Provide plausible incorrect options (distractors) to challenge students.
- Distractors should reflect common misconceptions.

Avoiding Ambiguity

- Questions should have definitive answers.
- Avoid ambiguous wording that can lead to multiple interpretations.

Sample Objective Questions and Their Explanations

Below are some representative discrete structure questions, along with detailed explanations of their answers. These exemplify the scope and style of effective MCQs.

Question 1: Sets and Operations

Q: If $A = \{1, 2, 3\}$ and $B = \{3, 4, 5\}$, what is $A \cup B$?

- a) $\{1, 2, 3, 4, 5\}$
- b) $\{3\}$
- c) $\{1, 2\}$

d) $\{4, 5\}$

Answer: a) $\{1, 2, 3, 4, 5\}$

Explanation: The union of two sets combines all unique elements. Therefore, $A \cup B = \{1, 2, 3, 4, 5\}$.

Question 2: Logic and Propositions

Q: Consider the propositions:

- p : "It is raining."
- q : "The ground is wet."

If $(p \implies q)$ (if it is raining, then the ground is wet), which of the following is a logically equivalent statement?

- a) $(\neg p \implies \neg q)$
- b) $(q \implies p)$
- c) $(\neg q \implies \neg p)$
- d) $(p \land q)$

Answer: c) $(\neg q \implies \neg p)$

Explanation: The contrapositive of $(p \implies q)$ is $(\neg q \implies \neg p)$, which is logically equivalent. This is a fundamental principle in propositional logic.

Question 3: Graph Theory

Q: In a simple undirected graph with 5 vertices, what is the maximum number of edges?

- a) 10
- b) 20
- c) 15

d) 25

Answer: a) 10

Explanation: The maximum number of edges in a simple undirected graph with n vertices is $\frac{n(n-1)}{2}$. For $n=5$:

[

$$\frac{5 \times 4}{2} = 10$$

]

Question 4: Combinatorics

Q: How many 3-letter arrangements can be formed from the letters A, B, C, D, without repetition?

a) 12

b) 24

c) 60

d) 120

Answer: a) 12

Explanation: Number of arrangements (permutations) of 4 letters taken 3 at a time:

[

$$P(4,3) = \frac{4!}{(4-3)!} = 4 \times 3 \times 2 = 24$$

]

But since the options suggest 12, it's likely a misinterpretation. Actually, the correct calculation is 24. Therefore, the correct answer should be:

Corrected Answer: b) 24

Note: This emphasizes the importance of careful question design and verifying calculations.
