It is considered positive when the force and displacement are in the same direction. What are the different types of energy discussed in 9th class physics? The main types of energy covered are kinetic energy, which is the energy possessed by a moving object, and potential energy, which is the stored energy of an object due to its position or configuration. Explain the concept of pressure in liquids as per class 9 physics syllabus. Pressure in liquids is defined as the force exerted per unit area on the walls of the container or on an object immersed in the liquid. It increases with depth and is given by the formula $P = \rho gh$, where ρ is the density of the liquid, g is acceleration due to gravity, and h is the depth. What is the law of conservation of energy in class 9 physics? The law of conservation of energy states that energy cannot be created or destroyed; it can only be transformed from one form to another. The total energy of an isolated system remains constant. How does the reflection of light occur, and what are its types according to 9th class physics? Reflection of light occurs when light rays bounce off a

surface. There are two main types: regular reflection, which occurs on smooth surfaces like mirrors, producing clear images, and diffuse reflection, which happens on rough surfaces, scattering light in many directions.
